

HiQ IN THE WINNING TEAM OF VOLVO CARS TECHNOLOGY AWARD

The Volvo Cars Technology Award is the most prestigious award within Volvo Cars, and acknowledges solutions that focus on innovation, good engineering, proven results and benefits for Volvo Cars. This year, the award within product development was given to In-Car Delivery, a project that HiQ has worked with since the start.

Volvo In-Car Delivery makes it possible to have ordered goods delivered directly to your connected car. The innovative service saves both time and hassle, for the recipient as well as for the vendor and the courier.

“We are honoured and happy to be a part of this successful team. We have worked with Volvo Cars for many years and this shows that we are on the right path in our shared ambition – to make people’s everyday lives simpler, better, and more fun,” says Jerker Lindstén, Managing Director at HiQ in Gothenburg.

HiQ took part in both the concept development and technical development of the globally acknowledged roam delivery solution. When the service was launched as In-Car Delivery in November 2015 it quickly became both renowned and appreciated, with a growing number of connected vendors.

“The innovation pace is high within the automotive industry and that suits us at HiQ perfectly. We are very proud of our collaboration with Volvo Cars – the best thing we know is to work with brave and forward-thinking clients and create solutions that simplify people’s lives,” says Lars Stugemo, President and CEO at HiQ.
