

HiQ wins framework agreement with Telenor Connexion

Following a tender process, HiQ signs a framework agreement with Telenor Connexion for consulting services in several areas related to development. Through the agreement, HiQ will help Telenor Connexion further develop its Internet of Things (IoT) platform.

"I'm very glad that we have a framework agreement with Telenor Connexion, one of the pioneers in IoT. This agreement is evidence of HiQ's high level of telecom expertise and yet more proof that our offering is in demand by the market," says Lars Stugemo, CEO and President of HiQ.

HiQ has been working with Telenor for a long time and is now broadening the collaboration to include Telenor Connexion.

"HiQ has solid experience with IoT, including a prior project with Telenor Connexion to build the solution for the highly-recognised Husqvarna Battery Box concept. We are very pleased to be involved in further developing Telenor Connexion's products for additional national and international expansion," says Martin Krona, Managing Director at HiQ in Karlskrona.

Telenor Connexion offers both connectivity and a cloud based IoT platform and is one of the leading global players when it comes to connecting products. Through the new agreement, HiQ will be able to deliver expertise and teams to Telenor Connexion.

"We look forward to our collaboration with HiQ as they have the expertise we are looking for. Together we will be able to further develop our offer," says Johan Björkman, Head of Sourcing at Telenor Connexion.
